The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/759,811

Applicant(s)

MILES ET AL.

Examiner

JONATHAN WERNER

Art Unit

3732

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 10 December 2007.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-9 and 11-20 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-9, 11-20 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 10 December 2007 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO/S508)
- Paper No(s)/Mail Date 12/10/07.
- 4) ☐ Interview Summary (PTO-413)
- Paper No(s)/Mail Date _____.
- 5) ☐ Notice of Informal Patent Application.
- 6) ☐ Other: _____.

DETAILED ACTION

1. This action is in response to Applicant's amendment received 12/10/07.

Drawings

2. The drawings were received on 12/10/07. These drawings are accepted.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claim 20 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Applicant claims the step of performing neuromonitoring while the device is used to retract a surgical worksite. Examiner cannot find support for such a claim in the originally filed disclosure, hence said claim is being treated as new matter.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claim 20 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. It is not clear what the claimed "result of said neuromonitoring" is. Further, "the result" in claim 20 lacks sufficient antecedent basis.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1, 3, 5, 11 and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mayer et al. (US 5,728,046) in view of Mathews et al. (US 6,206,826):

6. Mayer discloses a surgical retractor system (see Figures 1-2) for accessing a target site within a spine (i.e. column 1, lines 31-34), wherein said system comprises a primary retractor assembly having a handle assembly (i.e. frame assembly, 5) and three separate retractor blades (7,18,19) removably coupled thereto. This handle assembly is adapted to move each retractor blade between open and closed positions via holders (8,9) and corresponding holding arms (10,11). The overhead view of Figure 2 shows the system in an open position wherein each retractor blade is positioned generally away from one another. However, when holding arms (10,11) are extended longitudinally toward the center of the assembly, the system reverts back to a closed

position wherein each of retractor blades are generally adjacent to on one another. Mayer further discloses a supplemental retractor assembly having an arm (i.e. 20/21) with a fourth retractor blade (i.e. 32) removably coupled to said arm (i.e. via threaded spindle 29 and corresponding nuts 30,31). This arm (20/21) is shown coupled to the handle assembly (5) of the primary retractor assembly in Figures 1 and 2. The fourth retractor blade (32) is adapted to be introduced into the surgical site as shown in Figures 1-2, and which is capable of being moved to expand the worksite via threaded spindle (29) and corresponding nuts (30,31). Additionally, the system of Mayer includes at least one shim member (i.e. 36) adapted to be coupled to one of the retractor blades (see Figures 1-3), wherein said shim member includes a contiguous extension which is dimensioned to extend past the retractor blade as shown (see Figure 3). Mayer fails to disclose the use of a distraction assembly in conjunction with the aforementioned retractor assembly.

7. Mathews teaches a system for accessing a surgical target site comprising using a distraction assembly (i.e. D) in conjunction with a retractor assembly (see also Figure 21), wherein said distraction assembly is adapted to create a distraction space in a vertebral work site (column 11, lines 28-34). The retractor assembly shown by Mathews additionally includes four retractor blades (i.e. 10) which can be introduced simultaneously over the distraction assembly to the surgical target site (i.e. see Figures 21). Therefore, it would have been obvious to one having ordinary skill in the art at the time of Applicant's invention to modify the system of Mayer by including the distraction assembly as taught by Mathews in order to simultaneously distract the affected

vertebral disc space while also retracting said space. With respect to claim 3, the assembly of Mathews can include a plurality of sequential dilators (column 10, lines 59-65).

8. Claims 2 and 17-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mayer in view of Mathews, as applied to claim 1 above, and further in view of Luque (US 4,913,134):

9. Mayer and Mathews disclose the system as previously described in detail. Additionally, Mathews discloses the distraction assembly shown in Figure 21 is capable of being slideably passed over a guidewire if desired (column 10, lines 52-58). Mathews fails to disclose that the guidewire is a kirschner wire.

10. Luque teaches a spinal fixation system which utilizes a guidewire (17) that can be a kirschner wire (column 3, lines 59-61). Therefore, it would have been obvious to one having ordinary skill in the art at the time of Applicant's invention to modify the guidewire of Mathews by using a kirschner wire as taught by Luque in order to provide a fixation means to the bone (Examiner further notes that a k-wire is a type of guidewire).

11. Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Mayer in view of Mathews Luque, as applied to claim 2 above, and further in view of Arthur (US 972,983):

12. Mathews discloses the dilator as previously described above, but fails to specify that the dilator is a split-type dilator. Arthur, however, teaches a split dilator (i.e. see

Figure 7-8). Therefore, it would have been obvious to one having ordinary skill in the art at the time of Applicant's invention to modify the dilator of Mathews by utilizing a split dilator as taught by Arthur in order to increase efficiency by making operation of the device easier (column 1, lines 14-17).

13. Claims 6-8, 13 and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mayer in view of Mathews, as applied to claim 5 above, and further in view of Underwood et al. (US 2001/0056280):

14. Mayer and Mathews disclose the system as previously described above, but fail to show the assembly includes stimulation electrodes.

15. Underwood, however, teaches a retractor for use in spine surgery (i.e. 278), wherein said retractor includes a stimulation electrode (112) positioned near a distal end of the distraction system (see Figure 13). Therefore, it would have been obvious to one having ordinary skill in the art at the time of Applicant's invention to include a stimulation electrode with the retractor of Mayer in order to move, contract, and otherwise modify the tissue structures at the surgical site by using an electric stimulus as taught by Underwood. As to claims 7-8 and 20, the system can further comprise a control unit which is capable of electrically stimulating the electrode, sensing a response from stimulation of a nerve or muscle, and communicating to a user (i.e. paragraphs 0058 and 0071). As to claim 13, the control unit of Underwood can comprise a display (i.e. 32).

16. Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over Mayer in view of Mathews and Luque, as applied to claim 2, and further in view of Kraus (US 4,611,597):

17. Luque discloses the use of a k-wire as previously described, but fails to specify that said k-wire further comprises a stimulation electrode.

18. Kraus, however, teaches the use of a k-wire for insertion into bone, in which said k-wire further includes an electrode (column 3, lines 55-63). Therefore, it would have been obvious to one having ordinary skill in the art at the time of Applicant's invention to modify the k-wire of Luque by adding an electrode to its tip in order to provide a means for providing an electric stimulus for stimulating bone growth as taught by Kraus.

19. Claim 12 is rejected under 35 U.S.C. 103(a) as being unpatentable over Mayer in view of Mathews and Underwood, as applied to claim 7 above, and further in view of Shin et al. (US 4,226,228):

20. Underwood teaches the use of stimulation electrodes on the system as previously described, but fails to show the assembly includes a button on the handle.

21. Shin teaches a surgical retractor (i.e. 10) which includes a handle (i.e. 14) with a button (i.e. 18) on it. Therefore, it would have been obvious to one having ordinary skill in the art at the time of Applicant's invention to modify the previously detailed retractor system by including a button on the handle as taught by Shin in order to allow for the practitioner to easily access it during a surgical procedure.

22. Claim 14 is rejected under 35 U.S.C. 103(a) as being unpatentable over Mayer in view of Mathews and Underwood, as applied to claim 7 above, and further in view of Streeter (US 6,273,905):

23. Underwood teaches the system as previously described in detail above, but fails to show the control unit comprises a touch-screen display.

24. Streeter teaches a method for performing spinal surgery in which a control unit (i.e. 14) with a touch screen (i.e. 48) is used. Therefore, it would have been obvious to one having ordinary skill in the art at the time of Applicant's invention to modify the system of Underwood to include a touch screen in communication with the control unit in order for the practitioner to easily input data as taught by Streeter (column 4, lines 49-53).

25. Claim 20 is rejected under 35 U.S.C. 103(a) as being unpatentable over Mayer in view of Mathews, as applied to claim 16 above, and further in view of Schrom et al. (US 7,047,082):

26. Mayer and Mathews disclose the surgical access method as previously described above, but are silent as to the step of performing neuromonitoring.

27. Schrom teaches the step of neurostimulation to the spinal area using a neurostimulation lead, wherein said lead can be used for neuromonitoring (column 4, lines 1-8). Therefore, it would have been obvious to one having ordinary skill in the art at the time of Applicant's invention to perform the step of neuromonitoring as taught by

Schrom during the method steps of Mayer and Mathews in order to help diagnose neurological disorders.

Response to Arguments

28. Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to JONATHAN WERNER whose telephone number is (571)272-2767. The examiner can normally be reached on Monday-Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Cris Rodriguez can be reached on (571) 272-4964. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
